The universal frequency inverter from Fuji Electric, the G11S inverter

Ideal combination of power and multiple-function. Dynamic torque-vector control promises optimum motor control under any operating condition.

Dynamic torque-vector control system performs high-speed calculation to determine the required motor power for the load status. "Our key technology is optimal control of voltage and current vectors for maximum output torque" explains technical Manager, Mr. David Bedford.

The G11S inverter from Fuji Electric provides the following advantages;

- Dynamic torque-vector control
- Reduced motor wow at low speed
- New online tuning system
- Environment-friendly features
- Advanced, convenient functions
- Global products, communication
- Intelligent keypad panel
- Extensive product line

And Fuji Electric offers many more advantages.
