

## PRESS RELEASE

**Offenbach am Main, Thursday August 10, 2006**

Minimalistic, Frenic Mini serie

Fuji Electric is one of the leading companies in the drive and automation technology. Frequency inverters by Fuji Electric have been displaying their high quality standards and extensive performance spectrum for more than 25 years. The manufacturer's "know-how" and the world-wide availability of Fuji Electric guarantee safe implementation in machinery and systems.

Based on our experience and customer's needs, we have integrated our advanced designs and industry-leading technologies to develop a new inverter series, called the Frenic Mini.

The Frenic Mini features a full range of functions, compact body, simple operation, wide model variations, and global compatibility. It meets the needs for higher performance in machines and equipment such as conveyors, fans, pumps, centrifugal separators and food processing machines, as well as needs for system integration, energy saving, labor saving and total cost reduction.

The Frenic Mini offers:

- High starting torque of 150% and more at 5 Hz
- Internal PID regulator to control flow and pressure in fans and pumps
- Miniaturization to minimum level in the class
- Line-up to 4.0kW/400V (constant torque)
- Simplified torque vector control
- Easy programming
- Series communication

And many more points are offered to you by the technologies of Fuji Electric.
